6TH INTERNATIONAL SYMPOSIUM ON INNOVATIVE TECHNOLOGIES IN
ENGINEERING AND SCIENCE

Aim & Scope

The objective of the symposium is mainly to create an atmosphere for the academicians world-wide to share and discuss the holistic methods of the current interdisciplinary scientific activities so that a strong cooperation among the universities and scientists is achieved on the international level of engineering and basic sciences.

As the interpretation of scientific knowledge in recent years has gained importance in the process of holistic approaches, this symposium is thought to be an excellent opportunity to create a reliable interpretation of scientific findings in this so-called holistic-oriented analysis by examining the different dimensions and aspects of the fields of science within the framework of the scientific methods.

The symposium set up by the contents of broader perspectives of approaches and solution methods through the inclusion of all the basic sciences and engineering subjects will, hence, contribute to the future common research and scientific activities and projects for the participants.
